

Stability and Sustainability Indicators Report

2026 Q2

Resilient growth, rising inflation pressures

Sweden

Recovery firms, geopolitical inflation risks rise

- The Swedish economy started 2026 on a weak note but regained momentum in the second quarter. The labour market continued to recover gradually. Although unemployment remains elevated at 8.9%, employment is trending upwards and the jobless rate is expected to decline to around 7.8% by the end of 2027.
- Inflation is currently below the 2% target, helped by a stronger krona and temporary tax cuts. Rising energy prices are, however, expected to lift inflation above target, leading the Riksbank to increase the policy rate to 2.00% by the end of 2026 and 2.25% in February 2027.
- Housing prices have increased moderately, supported by stronger household purchasing power and eased mortgage rules. Geopolitical uncertainty and energy-price spillovers remain key risks. Credit quality is solid, with vulnerabilities largely concentrated among a limited number of CRE firms.

Baltics

Resilience holds as inflation diverges

- All three Baltic economies recorded solid GDP growth in the first half of 2026, driven mainly by household consumption. Exports also contributed significantly to economic activity. However, manufacturers are likely to face growing competitiveness pressures. Given the strong first-half performance and early Q3 data, GDP growth in Estonia and Latvia could exceed the current forecasts of 2.0% and 2.3%, respectively. Growth in Lithuania is expected to moderate slightly as the consumption boost fades, averaging 3% in 2026.
- Inflation has eased in both Estonia and Latvia compared with 2025, with the slowdown more pronounced in Estonia, where inflation fell to 1.5% in August, while it stood at 3.2% in Latvia. Inflation shot up to 6% in Lithuania, as the effects of pension withdrawals, higher excise taxes, and a sizeable minimum wage increase accumulated. Falling food prices this year are easing inflationary pressures across the Baltics. Higher energy prices will keep inflation elevated in Lithuania and push it higher in Estonia and Latvia this autumn.
- Despite higher interest rates, lending growth remained strong across the Baltics in the first half of 2026, supported by solid economic activity. Overall private-sector leverage remained relatively low. Housing affordability in the Baltics has weakened slightly as house prices, particularly in Riga and Vilnius, are rising faster than wages, while higher interest rates are increasing borrowing costs.

Risks

Risk balance becomes less favourable

- Growth risks remain tilted to the downside, while inflation and policy rate risks are tilted to the upside.
- Escalating tensions in the Middle East, Ukrainian drone attacks on Russian oil refineries, stronger competition from Asia for natural gas, and low inventories have pushed energy prices higher. Moreover, supply disruptions could further weigh on economic activity and trigger renewed volatility in financial markets.
- Higher import tariffs remain a risk, as the US trade investigations continue and EU-China trade tensions risk further escalation.
- Climate-related weather extremes are adding to inflation risks through higher and more volatile energy and food prices.
- Rising budget deficits have supported resilience, but higher debt levels and rising bond yields point to an unsustainable trend.
- Geopolitical tensions could intensify in the Nordic-Baltic region. Sabotage of communications and energy infrastructure, as well as cyberattacks, have already become more frequent and damaging.

Sustainability

Progress nearly at a standstill

- Countries have made only marginal progress on sustainable development. The Baltic states edged up slightly in the 2026 SDG Index, while scores for Sweden and the EU average declined. Overall, Sweden ranks 2nd, Estonia ranks 16th, Latvia 20th and Lithuania 26th.
- The biggest challenges remain in Lithuania and Latvia, particularly in terms of inequality. Climate trends are also deteriorating in both countries. Sweden performs much better than the Baltic states overall, although progress on climate action has stagnated.
- Clean energy continues to advance, particularly in the Baltics. Nevertheless, dependence on fossil fuels in transport remains high across all three states, leaving them more exposed to energy price shocks, such as the war in the Middle East.

Estonia

Macroeconomic developments:

Economy continues to grow

- In the first half of the year, the economy grew by 2.3%, over the year. The main driver of growth in the second quarter was private consumption, although government consumption and investment also increased. Estonia's economy is expected to grow by more than 2% this year and by 2.5% in 2027.
- Swedbank's card payment data indicate that consumer spending remained strong in July and August. Consumer confidence continued to improve in August.
- Goods' export growth accelerated markedly in the second quarter. In the first seven months of this year, exports of Estonian-origin goods have increased significantly, including the exports of electronics, various machinery and equipment, and mineral products.
- Inflation decelerated to very low levels in August as food prices dropped reflecting earlier decline in global food commodity prices and tight competition in the retail market. However, inflation is expected to pick up in the autumn as energy prices rise. Swedbank forecasts annual inflation of above 3% this year.

Main macroeconomic risks:

Trade and energy

- As a small, open economy, Estonia is vulnerable to developments in key trading partners. Geopolitical tensions can bring higher inflation and lower GDP growth. Energy price fluctuations remain a significant risk because the country still faces relatively high energy costs and ongoing adjustments in its energy transition.

Wage growth has decelerated

Labour market indicators, %

Sources: Swedbank Research & Macrobond

Financial sector issues:

Lending remains active

- Higher economic activity and improved sentiment supported demand for corporate and housing loans.
- Somewhat higher interest rates (up to 1 percentage point higher compared to one year ago) have not dented neither corporate sector credit growth nor mortgage lending.
- Tallinn's housing market remained active in the second quarter, but demand continues to be concentrated in the secondary market. Although Euribor has increased, housing affordability has improved, as the growth in net wages, supported by the income tax reform, is significantly outpacing the rise in apartment prices.
- Corporate lending is most active among real estate and construction sectors. The quality of the banks' loan portfolio remains very good.
- New leasing volumes have recovered somewhat but are still significantly lower compared to pre-car-tax levels.

Sustainable development goals:

Some progress

- Estonia has improved its score in environmental conservation, digital transformation, and human capital, but it still faces challenges related to resource efficiency and economic restructuring.
- At the same time, Estonia's resource productivity remains below the EU average. Estonia is shifting away from traditional resource-intensive industries (such as oil-shale-based energy) toward greener and more digital sectors. While positive in the long run, this transition creates short-term adjustment pressures in certain regions and industries.

Latvia

Macroeconomic developments:

So far, so good

- The economy has proved more resilient than projected in the spring. GDP grew by 3.0% y/y in Q2 and by 2.8% in the first half of 2026, supported by household spending, recovering exports, and investment. Early Q3 data point to continued solid growth.
- The current account deficit widened as the goods trade balance deteriorated, reflecting stronger imports driven by higher defence spending and investment, as well as higher mineral-product prices.
- The labour market remains relatively tight, with unemployment stable at around 7%. Yet wage growth slowed surprisingly rapidly to 4.6% in the first half of 2026 from 7.7% in 2025, reflecting financial constraints in both the public and private sectors.
- Inflation has averaged 3.0% y/y so far in 2026, down from the 2025 average, thanks to lower food prices. However, inflation accelerated to 3.2% in August and is expected to rise further amid higher energy prices, averaging around 3.4% in 2026.

Main macroeconomic risks:

Uncertainty, inflation, and debt

- Energy prices remain a key risk. Higher fuel and district heating costs are adding to inflationary pressures. Electricity price increases will be felt only gradually, given the high share of fixed-price contracts among households and firms. Geopolitical tensions raise the risk of further energy price increases, making inflation more persistent and slowing disinflation next year. This, together with heightened uncertainty, could weigh on economic activity.
- The budget deficit is set to exceed 5% of GDP by 2028, while public debt and bond yields are rising, increasing the need for fiscal consolidation.

Exports recovering, foreign trade in deficit

Current account and foreign trade

Sources: Swedbank Research & Macrobond

Financial sector issues:

Lending still strong, sector resilient

- Despite rising interest rates and elevated uncertainty, lending to households and non-financial corporations remained strong in the first half of 2026. Nevertheless, the ECB Bank Lending Survey suggests the demand for corporate loans may be weakening. Private sector indebtedness remains low, and deposits continue to rise.
- Strong housing affordability has supported mortgage demand, but affordability is gradually easing as house price growth, particularly in the secondary market, accelerates, while wage growth moderates and interest rates rise.
- The banking system is well capitalised and liquid, with non-performing loans remaining low and stable. Banking sector profitability declined at the end of 2025 as lower interest rates reduced net interest income, while solidarity tax payments and a one-off provisioning expense at one bank increased costs. Despite the decline, profitability remained strong relative to the 2018-2022 period.

Sustainable development goals:

Progress towards renewable energy

- In contrast to the slow progress in social inclusion and governance, Latvia has made notable advances in energy sustainability and security.
- Over the past two decades, Latvia has significantly reduced its dependence on energy imports, lowering its vulnerability to external shocks. This has been driven by a reduced reliance on natural gas and greater use of domestic and renewable energy sources. Latvia's renewable energy consumption reached a ten-year high in 2025.
- As a higher share of renewable energy can increase price volatility, electricity storage is becoming increasingly important. Latvia's battery capacity projected to grow from 99 MW in 2025 to 1.1 GW by 2050.

Lithuania

Macroeconomic developments:

GDP growth has accelerated

- Lithuania's economy, driven by household consumption, manufacturing and construction expanded by 3.3% in the first half of 2026. However, as the temporary boost to consumption fades, we forecast somewhat lower growth going forward.
- Manufacturing (except oil) increased by 5.8% in the first half of this year and was broad-based, while computers and electronics continued to grow at a double-digit pace. Export orders and business confidence have increased and remain close to their long-term averages. Last year exports of services have overtaken exports of goods, and this trend is expected to continue as manufacturers are likely to face increasing competitiveness challenges.
- Inflation is expected to remain elevated and above 5% this year, driven by both domestic and external factors, but will ease in 2027. The additional household spending generated by pension withdrawals may have added around 1 p.p. to inflation, but the greater damage lies in undermining the long-term sustainability of the pension system and eroding households' long-term financial assets.

Main macroeconomic risks:

Debt & Competitiveness

- Although public sector debt remains relatively low, large budget deficit and continued pressures to increase spending increase the risk of fiscal sustainability in the longer term.
- Continued rapid growth in labour costs – the minimum wage is expected to rise by 8% in 2027, following an 11% increase this year. This could further weaken cost competitiveness and weigh on exports over the medium to long term.

Financial sector issues:

Continued credit expansion

- Credit growth remained strong, supported by rapid economic and wage growth as well as high consumer confidence. As of July, the total bank loan portfolio was growing at an annual rate of 15.7%. Household lending increased by 15.4%, supported by continued strength in the housing market. Corporate lending grew even faster, by 17.3%, reflecting strong demand for investment and working-capital financing. Growth has been broad-based, but particularly strong in real estate, energy and construction. Annual credit growth remains among the fastest in the euro area.
- Overall, private sector indebtedness remains at only 17% of GDP for corporates and 22% for households. The relatively low level of corporate indebtedness leaves room for further financial deepening. The banking sector is well capitalized, while non-performing loans remain at very low levels (below 1%).
- Following the pension reform, a significant share of withdrawals has remained in bank accounts. As a result, deposits held by domestic residents increased from EUR 28 billion at the beginning of the year to almost EUR 31 billion in July.

Sustainable development goals:

Social risks and SDG gaps

- The SDG assessment shows Lithuania faces the greatest challenges among the Baltics, ranking 26th in Europe on the 2026 EU SDG Index.
- Under the Social Climate Plan, endorsed by the European Commission in June this year, Lithuania plans to use EUR 884 million in 2026-2032 to reduce energy and transport vulnerability. The plan includes support for home renovation, cleaner transport, public transport and social housing.

Sweden

Macroeconomic developments:

Broad-based growth in Q2

- After a slow start to the year, the Swedish economy regained momentum in Q2, with GDP rising 1.6% from Q1 and 3.3% from a year earlier. Growth was broad-based, led by private investment. Early Q3 data paint a mixed picture with strong consumption and solid services activity offset by weaker exports and industrial production. GDP declined 0.8% in July from June.
- The labour market has plateaued, and the unemployment rate remains elevated (8.9% in August). However, the employment rate is also high, both in a historic and international perspective (at 70.0%). As economic activity continues to improve, we expect the unemployment rate to start to decline.
- Inflation is below the 2% target, reflecting the krona's earlier appreciation and temporary tax cuts. However, it appears to have bottomed out and is expected to rise gradually, driven mainly by higher energy prices and the normalization of fuel and public transport taxes. We expect the VAT cut on food to remain in place.
- The Riksbank has signalled readiness to act if inflation risks materialise. We expect the policy rate to be hiked to 2.00% in November, after a clear signal at the September-meeting. Early 2027, the policy rate will be hiked again to 2.25%, where we expect the Riksbank to pause until inflation risks fade off in 2027.
- Housing prices have risen around 3% so far this year compared with the same period last year. Transaction volumes are close to pandemic levels, with record activity in the single-family homes market. Improved purchasing power and eased mortgage rules have helped boost market activity.

The unemployment rate has plateaued

Labour market indicators, %

Sources: Swedbank Research & Macrobond

Inflation at the bottom; will increase

Consumer price inflation, y/y %

Sources: Swedbank Research & Macrobond

Main macroeconomic risks:

Shaky Middle East, Shaky energy markets

- The ongoing Middle East conflict remains the largest risk to the macro-economic development, as it creates instability in energy markets, disrupts freight and drives up prices. We have already revised our forecast for Swedish inflation upwards due to the war, and if the conflict persists, further spillovers on the Swedish economy are likely. So far, Swedish growth has held up better than expected, but if global trade experiences a more serious downturn, while inflation remains elevated, the outlook will deteriorate further.

Financial sector issues:

Credit quality remains solid

- Household lending growth is rising slowly, and lending to non-financial corporates has picked up. The krona has depreciated about 6% since January. Short-term interest rates have reached the bottom as the Riksbank will start to hike later this year. The risk premia connected to CRE firms and their leverage, has recently increased. We expect the risk premia to remain or further increase in the near term, driven by increased inflation risks. However, this is not a systemic risk; it is a risk for individual firms.

Sustainable development goals:

Lowered taxes on fuels

- As of now, [forecasts](#) indicate that Sweden will not reach its climate targets until 2030, 2040, or 2045. The response to the war in the Middle East and rising energy prices has been to lower the tax on fuels, which probably has supported demand and increased emissions, all else equal. Government formation negotiations are expected to take time, and how the government will look and who will be Ministry of Climate and Energy is yet to be decided.

Improved sentiment, except in construction

Economic confidence

Price stability

Annual CPI growth (and CPII for Sweden, lilac line), % and Swedbank forecast (annual average)

Labour market

Unemployment rate (15-74, % 3yma); registered unemployment rate (lilac line, % 3yma) and Swedbank forecast (annual average)

Housing affordability

Swedbank housing affordability for capitals, m² (black line for Stockholm, lilac line for Sweden)

Note: Housing affordability shows the amount of m² households can afford, according to the established norm (use max 30% of their income for mortgage costs). In the Baltics affordability is calculated for a family whose income is equal to 1.5 of average net wages. For Sweden affordability is calculated for 2 adults and 2 children with median disposable income paying for an apartment with tenant-owner rights. For Sweden all housing costs are taken into account (not only interest rates, but also e.g., heating, insurance etc.).

Housing prices

Deflated apartment prices in capitals, (tenant-owned apartments for Stockholm, lilac line for single-family homes in Sweden)

IMPORTANT INFORMATION

This report (the "Report") has been compiled by analyst(s) at Swedbank Macro Research, a unit within Swedbank Research that is part of Corporates & Institutions ("Swedbank Macro Research"). Swedbank Macro Research is responsible for preparing reports on economic developments in the global and domestic markets. Swedbank Macro Research consists of research departments in Sweden, Finland, Norway, Estonia, Latvia, and Lithuania.

What our research is based on

Swedbank Macro Research bases its research on a variety of aspects and analysis, for example, a fundamental assessment of the cyclical and structural economic, current, or expected market sentiment.

Distribution & recipients

This Report is distributed by Swedbank Macro Research within Swedbank AB (publ) ("Swedbank"). Swedbank is under the supervision of the Swedish Financial Supervisory Authority (Finansinspektionen). In no instance is this Report altered by the distributor before distribution.

In Finland, this Report is distributed by Swedbank's branch in Helsinki, which is under the supervision of the Finnish Financial Supervisory Authority (Finanssivalvonta).

In Norway, this Report is distributed by Swedbank's branch in Oslo, which is under the supervision of the Financial Supervisory Authority of Norway (Finanstilsynet).

In Estonia, this Report is distributed by Swedbank AS, which is under the supervision of the Estonian Financial Supervisory Authority (Finantsinspeksioon).

In Latvia, this Report is distributed by Swedbank AS, which is under the supervision of The Financial and Capital Market Commission (Finanšu un kapitāla tirgus komisija).

In Lithuania, this Report is distributed by "Swedbank" AB, which is under the supervision of the Central Bank of the Republic of Lithuania (Lietuvos bankas).

This Report is not intended for physical or legal persons who are citizens of, or have domicile in, a country in which dissemination is not permitted according to applicable legislation or other decisions.

This Report or any information in it is not for release, publication, or distribution, directly or indirectly, in or into the United States or any other jurisdiction in which such distribution would be unlawful or would require registration or other measures.

In the United Kingdom, this Report is addressed to and directed only at, and should only be relied upon by, persons who have professional experience in matters relating to investments falling within Article 19(5) of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005, as amended (the "Order"), persons who are high net

worth entities falling within Article 49(2)(a) to (d) of the Order or are persons to whom it may otherwise be lawful to communicate the Report to (all such persons being referred to as (Relevant Persons)). No other person should act or rely on this Report and persons distributing this Report must satisfy themselves that it is lawful.

Limitation of liability

All information, including statements of fact, contained in this Report has been obtained and compiled in good faith from sources believed to be reliable. However, no representation or warranty, express or implied, is made by Swedbank with respect to the completeness or accuracy of its content, and this Report is not to be relied upon as authoritative and should not be taken in substitution for the exercise of a reasoned, independent judgment by you.

Be aware that statements regarding future assessments comprise an element of uncertainty. You are responsible for such risks alone, and Swedbank recommend that you supplement your decision-making with material that is assessed to be necessary.

Opinions contained in this Report represent the analyst's present opinion only and may be subject to change. In the event that the analyst's opinion should change or a new analyst with a different opinion becomes responsible for Swedbank Macro Research's coverage, Swedbank will endeavour (but does not undertake) to disseminate any such change, within the constraints of any regulations, applicable laws, and internal procedures within Swedbank or other circumstances.

Swedbank is not advising or soliciting any action based upon this report.

To the extent permitted by applicable law, no liability whatsoever is accepted by Swedbank for any direct or consequential loss arising from the use of this report.

Conflicts of interest

In Swedbank Macro Research, internal guidelines are implemented in order to ensure the integrity and independence of the research analysts. All research reports are independent and based solely on publicly available information.
